

ABS-Lock Falz III

Fall Protection Anchor Metal Roof | clamped

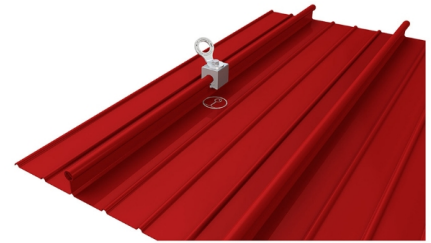

Small anchorage point with a great impact – specially designed for seam roofs

This is how to keep your roof sealed up! Our ABS-Lock Falz anchors are simply clamped onto a seam - without penetrating the roof membrane. All you need to secure 1 individual from falling off a roof is one of our optically unobtrusive ABS-Lock Falz III anchorage points - specially designed for rounded-edge seams.

The anchorage eyelet is made of stainless steel and rotates a full 360°. The clamp is manufactured from weather-resistant aluminum material. Due to its extremely compact design, our ABS-Lock Falz III does not negatively impact the optical appearance of your metal seam roof. Viewed from a distance, you can hardly see this anchorage device at all.

If required, you can also use an ABS-Lock Falz III device as a temporary single anchorage point. It is lightweight, good value and just pops into your bag.

- EN 795:2012, B
- Penetration-free installation on a seam
- Mounted on a single seam
- Aluminum thickness 0.7mm
- e.g. BEMO or similar

- Seam roofs
- Flat Roofs
